2874

DATE MAILED: 01/03/2005

Please find below and/or attached an Office communication concerning this application or proceeding.

Office Action Summary	Application No.	Applicant(s)	
	09/965,537	LACEY, JONATHAN	
	Examiner	Art Unit	
	Daniel J Petkovsek	2874	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on response filed November 12, 2004.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-3, 8, 9 and 11-20 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-3, 8, 9, and 11-20 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on September 3, 2003 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
 Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
 Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

This office action is in response to the response by Applicant filed November 12, 2004.

Claims 1-3, 8, 9, and 11-20 are finally rejected.

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-3, 8, 9, and 11-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nagahori et al. U.S.P. No. 5,896,213, and further in view of Geile et al. U.S.P. No. 6,336,201, and further in view of Liu et al. U.S.P. No. 5,485,465.

Nagahori et al. U.S.P. No. 5,896,213 teaches (ABS, Figs. 2, 4, and 5, summary, claim 1) an optical fiber network system comprising: an optical transmitter 6 for broadcasting an optical signal to a plurality of optical receivers 31-3N; a branching point 3 coupled to the transmitter including a 1xN element; and first and second individual optical transmission lines corresponding to particular end users. Nagahori et al. '213 does not explicitly teach that the branch element is 1x2, or the optical transmission lines are optical fiber cables surrounding fibers 51-5N.

Regardless, 1x2 splitters are well-known arrangements of optical networks since they create a greater number of signals to transmit to the customer/user. Geile et al. U.S.P. No. 6,336,201 teaches (column 21, line 60 through column 22, line 6) a fiber cable transmission system that transmits optical signals to users by use of a branching point, in which it is taught

Art Unit: 2874

that a tree of cascaded splitters can be used in any optical transmission network in order to further multiply the number of duplicated optical signals and thus increase the remote units serviceable by a single transmission signal. Any tree arrangement (1x2, 1x3, 1xN, etc) would have been reasonably suggested.

Since Nagahori et al. '213 and Geile et al. '201 are both from the same field of endeavor, the purpose of splitting the optical signal into a plurality of usable optical signals for desired end users, as disclosed by Geile et al. '201, would have been recognized in the pertinent art of Nagahori et al. '213.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to use a tree of splitters (such as 1x2, or other splitters) in the branching point of Nagahori et al. '213 for the purpose of sending this optical signal to a greater plurality of end users for the purpose of broadcasting the signal to more users for more economic growth capabilities.

Regarding the limitation that the optical transmission line is not an optical fiber cable, since cables are well known in the art to protect and envelop optical transmission lines, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to use optical cables to protect the optical signals traveling to the end user, since cables are well-known forms of transmission lines in the art.

Nagahori et al. '213 does not explicitly teach a second cable to provide "route diversity" in the optical branching device.

Art Unit: 2874

Liu et al. U.S.P. No. 5,485,465 teaches (column 2, line 52 through column 3, line 9, column 5, lines 33-41) a broadcast network in which redundancy control is used, particularly in which a second fiber optical cable is used as a protection/redundancy line. This second optical fiber protection line implements “route diversity” of the optical broadcast system since any errors or losses of signal result in a switching to the second optical fiber cable to ensure that the broadcast signal is received by the end user(s).

Since Nagahori et al. ‘213 and Liu et al. ‘465 are both from the same field of endeavor, the purpose taught by Liu et al. ‘465, implementing “route diversity” by having a protection/redundant optical fiber cable, would have been recognized in the pertinent art of Nagahori et al. ‘213 in order to improve the functionality and error-control of the broadcast system.

It would have been obvious at the time the invention was made to a person having ordinary skill in the art to add a protection/redundant second optical fiber cable to the optical broadcast network of Nagahori et al. ‘213 for the purpose of decreasing error, keeping optical signals, improving end user functionality, etc., as taught by Liu et al. ‘465.

Regarding claims 2 and 3, the network is arranged as a star, and has buses. Regarding claim 8, the branching is located in central office or in a “field”. Regarding claims 11 and 12, there is a plurality of optical receivers. Regarding claims 13-16, these components are well-known in any optical routing system, although not explicitly disclosed. Regarding claim 17, all optical fibers have signals.

Regarding method claims 18-20, the methods are reasonably suggested (for the same reasons as claim 1 is rejected) by the combination of the references above.

Response to Arguments

3. Applicant's arguments filed November 12, 2004 have been fully considered but they are not persuasive.

Applicant traverses the rejection of claims 1-3, 8, 9, and 11-20 under 35 U.S.C. 103(a) Nagahori et al. U.S.P. No. 5,896,213, and further in view of Geile et al. U.S.P. No. 6,336,201, and further in view of Liu et al. U.S.P. No. 5,485,465. Regarding the limitation pointed to by Applicant on page 3, paragraph 4, about the transmission line not being a cable, this statement was to clarify that an outer sheath or jacket is well-known in the art to protect optical transmission lines, such as fibers. Clearly, a person having ordinary skill in the art would recognize that a sheath or jacket to protect an optical fiber from external conditions. A cable protects fibers from water, outside contact, and other forces that can cause error in the transmission path.

The Examiner's rejection above meets all of the requirements of 35 U.S.C. 103 (a). The *claimed limitations* are not viewed as having any novel feature or utility in the art.

Conclusion

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37

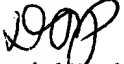

Art Unit: 2874

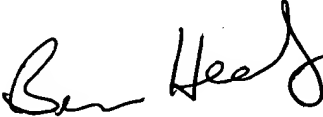

CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Daniel J Petkovsek whose telephone number is (571) 272-2355. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rodney Bovernick can be reached on (571) 272-2344. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
